

## Property (SEMAT)

*In what state are you in? Why? What are obstacles to reach the next state?*

### **Seeded**

We have a clear mission with completing the lab and the constraints of the project are known. Our responsibilities are clear and divided and the level of commitment has been established - we aim to pass the assignment and if we find the P+ assignments as fun and challenging we try to complete them as well. The leadership is very open and we help each other with the assignments. Thus, the **Seeded** stage is met.

### **Formed**

We all have our individual responsibilities in the project and understand what we are supposed to complete. Due to the dependencies in the project we have also helped each other a lot with the different tasks which were handed to us. We had a bit of a hard time understanding what we were supposed to do and all group members lacked the competence to complete the assignment; however, we learned how to tackle it as a team. We have online meetings almost daily as a standup to see what we can help each other with. Everybody has accepted their responsibilities and worked hard to achieve the common goal. We communicate through Discord and Zoom. Thus, the **Formed** stage is met.

### **Collaborating**

Due to the dependencies in this Lab the group has really come together as a cohesive unit. Everybody is honest with what they feel they can and cannot do. There is a psychological trust and everybody feels safe to ask for help if needed. Thus, the **Collaborating** stage is met.

### **Performing**

The performing stage is not quite met yet. We have needed outside help from TAs and from external sources to understand what we are trying to achieve. We have not been able to tackle how to minimize wasted work and sometimes we have done double work because of communication misses. Thus, the **Performing** stage is not quite met yet.
